

We say: ALL local businesses are essential!

CAN YOUR BUSINESS REALLY SURVIVE ANOTHER LOCKDOWN?

Our local community stands together with its vital shops and services!

Dear business owner,

As a community we want to support your business and all local independent businesses. We want you to survive because you are vital to our local resilience and central to our vibrant community. We love what you do!

We can be pretty sure that there will be another lockdown imminently and we urge you to **stay open, REGARDLESS** of what the government says. **There is no scientific basis to lockdowns.** In fact, after all the various lockdowns, we are no closer to a resolution, and we can see a great many harms that lockdowns have created in terms of escalating misery and mental health problems, restricted access to essential health and social care, increased poverty/dependence on the State, and the wilful destruction of small businesses like yours.

We know that **the government has lied time and time again** throughout this crisis. We know that any dissenting voices are either suppressed or vilified, so therefore no healthy debate has taken place. The uncertainty and confusion caused by this has been instrumental in creating huge divisions in our communities.

We need to work **together** to create resilient communities, able to respond to local needs, able to support one another, creating local prosperity **together**. We are witnessing an unprecedented transfer of wealth that is blatantly in favour of large corporate entities. Sadly, many small businesses have been forced to close, each one a sad and unjust loss of livelihood for the owners and a loss of local enrichment for the community.

So we urge you to **STAY OPEN**. The police do **NOT** have the power to fine you. If they try, then take it to court. You **WILL WIN**. The wider community will support you in such scenarios too – we promise! All of the fines from the last lockdown were **dismissed as unlawful** because the Covid rules themselves are unlawful.

We urge you to talk to your neighbouring businesses who have also received this message of support. There is strength in numbers. Perhaps you could meet with them and decide collectively to resist any notion of 'lockdown'. If you do, invite local residents too by advertising on social media and in shop windows. We will turn up to support you and we will be your loyal customers throughout. **#Together** we will push back against big business being the priority of the Government. **We will protect businesses like yours.**

STAND YOUR GROUND. STAY OPEN. PROTECT YOUR FREEDOM. PROTECT YOUR BUSINESS.

Where did 'lockdown' come from? The idea of quarantining **healthy people** was **unheard of** before 2020. It is an invention of the totalitarian Communist government in China. Why on earth did we do it here? Did it work?

What does the UK pandemic plan say about 'lockdowns'? Forcing healthy people to stay at home and businesses to close is specifically **ruled out** in the UK's plan for flu-like viruses – but for some reason, this long-standing, expert plan, agreed and published in 2011, was **abandoned** by the UK Government in 2020.

What do Directors of Public Health in our local councils think? They know the original virus plan well and were **astonished and alarmed** that it was thrown out in favour of 'lockdowns'. They also know that by enforcing lockdowns, they and other public authorities are on very shaky legal ground indeed. The fines won't stick!

What about places that never locked down – how are they doing? Florida is a great example: it never locked down, and it's thriving AND healthy too! Right now, lawyers are working hard to get international courts to declare lockdowns to be a **crime against humanity**.

What did the 'leaders' say about asymptomatic spread in 2020? Boris Johnson, Matt Hancock and America's Dr Anthony Fauci all said **on camera** that asymptomatic spread is **very rare** and is **NOT** a driver of viral spread. The HART group of Britain's leading independent scientists says that lockdowns do **not** control the spread of viruses and must **never** be used again in the UK.
