

FACTS ABOUT MASKS

OXYGEN DEPRIVATION AND CO² POISONING

Children require more oxygen than adults and their lungs are smaller and weaker.

Reducing oxygen can damage the brain, heart & lungs.

After just one minute, CO² levels are 25 times higher than the accepted tolerance levels. Symptoms may include dizziness, anxiety, tiredness and reduced performance.

BACTERIAL INFECTION

In the warm and moist environment of the mask, bacteria, virus' and spores thrive especially well. Masks can make the wearer very sick and spread disease.

PSYCHOLOGICAL DAMAGE

We are social beings. Facial expressions are a crucial part of our children's learning and understanding.

Children can suffer psychological damage when unable to communicate adequately with others.

Being unable to recognise emotions adds to the psychological suffering.

Reducing oxygen could cause irreversible damage to the brain, heart and lungs.

Masks fuel anxiety and cause stress.

Do YOUR own research. YOUR child. YOUR responsibility.
